European Mathematical Society (EMS)

1. A brochure "Mathematics of Planet Earth" will be prepared. The research institutes in Europe and specialists concerned with MPE problems will write articles of two to three pages where they explain in nontechnical terms how they use mathematics to understand this world better: astronomy, earthquakes, wheather, climate models, risk analysis, etc. Maybe this can also be published as a book.

2. The same on a more technical level: A collection of scientific articles, understandable by the "average" mathematician.

3. A *EMS Diderot forum* (a conference taking place simultaneously at several places, with video connection) with the title “Mathematics of Planet Earth 2013”.

The persons responsible for this forum are Franka Brueckler and Mireille Chaleyat-Maurel. The partner cities will be most likely Berlin, Exeter and Zagreb. It will take place in December 2013, as a closing of MPE 2013.

4. We plan at least two articles published in the EMS Newsletter, one introducing MPE2013 and another one announcing the competition for a virtual exhibition in the framework of MPE2013. This will include an invitation to all member societies and individual mathematicians to prepare certain activities.

5. A variety of individual activities: lectures, articles in newspapers, etc. Ehrhard Behrends will try to have a column in "DIE WELT" (as he had in the past). The idea is that every week there is an mpe article. activities.

6. Ehrhard Behrends will produce a text to be posted on the MPE2013 web.
