

# Primes in arithmetic progressions and Vaughan’s approximation

Daniel Fiorilli\*

[daniel.fiorilli@uottawa.ca](mailto:daniel.fiorilli@uottawa.ca)

---

I will discuss primes congruent to  $a$  modulo  $q$ , with  $a$  fixed and on average over  $q$ . My goal is to show that Vaughan’s approximation is superior to the usual approximation for this quantity, and that it has a bias towards certain values of  $a$ .
