

Supersymmetric gauge theories and exact conformal blocks

Andrei Marshakov^{*}

mars@itep.ru; amarshakov@hse.ru

I review the construction of the twist-field correlation functions and apply it to the W -algebra conformal blocks, arising in the context of SUSY gauge theories and isomonodromic deformations. I plan to discuss the relation of this construction with the Seiberg–Witten prepotentials on particular restricted regions in the moduli spaces of flat connections.
