

# Non local currents, quantum groups and discrete holomorphicity

Robert A. Weston<sup>\*</sup>

[R.A.Weston@hw.ac.uk](mailto:R.A.Weston@hw.ac.uk)

---

I will review the quantum group description of non local currents in integrable lattice models. I will then discuss the connection with the concept of discretely holomorphic operators in critical lattice models. This connection will be illustrated using the example of the chiral Potts model and the method will be exploited in order to examine the model at both conformal and non conformal points.
