

Some applications of space filling curves

Robbert FOKKINK*

r.j.fokkink@tudelft.nl

A lot is known about space filling curves. There are many different ways to construct them, and they come up in many different problems. I will discuss one such problem in particular, which comes from lithography. It calls for the construction of "random" space filling curves. This problem is far from settled. You may consider solving it as an exercise.
