

ATELIER NSDC « ANALYSE DE DONNÉES DIRECTIONNELLES AVEC APPLICATIONS EN BIOMÉCANIQUE
ET EN IMAGERIE MÉDICALE »

25–27 NOVEMBRE 2009

NICDS WORKSHOP “THE ANALYSIS OF DIRECTIONAL DATA WITH APPLICATIONS TO
BIOMECHANICS AND BIOMEDICAL IMAGING”

NOVEMBER 25–27, 2009

Wishart Distributions for Graphical Gaussian Models

HÉLÈNE MASSAM

Graphical models are statistical models built to work with high-dimensional data and to be able to express various dependences and conditional independences between the variables considered. When the variables follow a Gaussian distribution, one is lead to work with matrix variates which follow distributions that are not classical. We will review the development of the last ten years in this area as well as their applications.
